Exercise 03: Quicksort

Write a text file named '`quick.txt`' that constructs a trace table that only tracks the changes made to its array parameter for each of the following callers. Each swap must be considered a single change.

Callers

1. `PARTITION(A,1,5)` where `A = [52,88,96,66,45,99,60,37]`
2. `PARTITION(A,0,7)` where `A = [27,35,49,44,58,91,19,62]`
3. `PARTITION(A,0,6)` where `A = [48,72,34,89,14,21,54,85]`
4. `QUICKSORT(A)` where `A = [41,28,66,20,37,15]`
5. `QUICKSORT(A)` where `A = [20,35,64,42,93,17]`
6. `QUICKSORT(A)` where `A = [19,50,36,11,48,85]`
